HOW GORDON WORKS!

HOW GORD

FUNNEL

You can find this hollow black tube right above Gordon's head. It is through Gordon's funnel that his steam escapes, making a loud whistle sound.

LAMP ROD

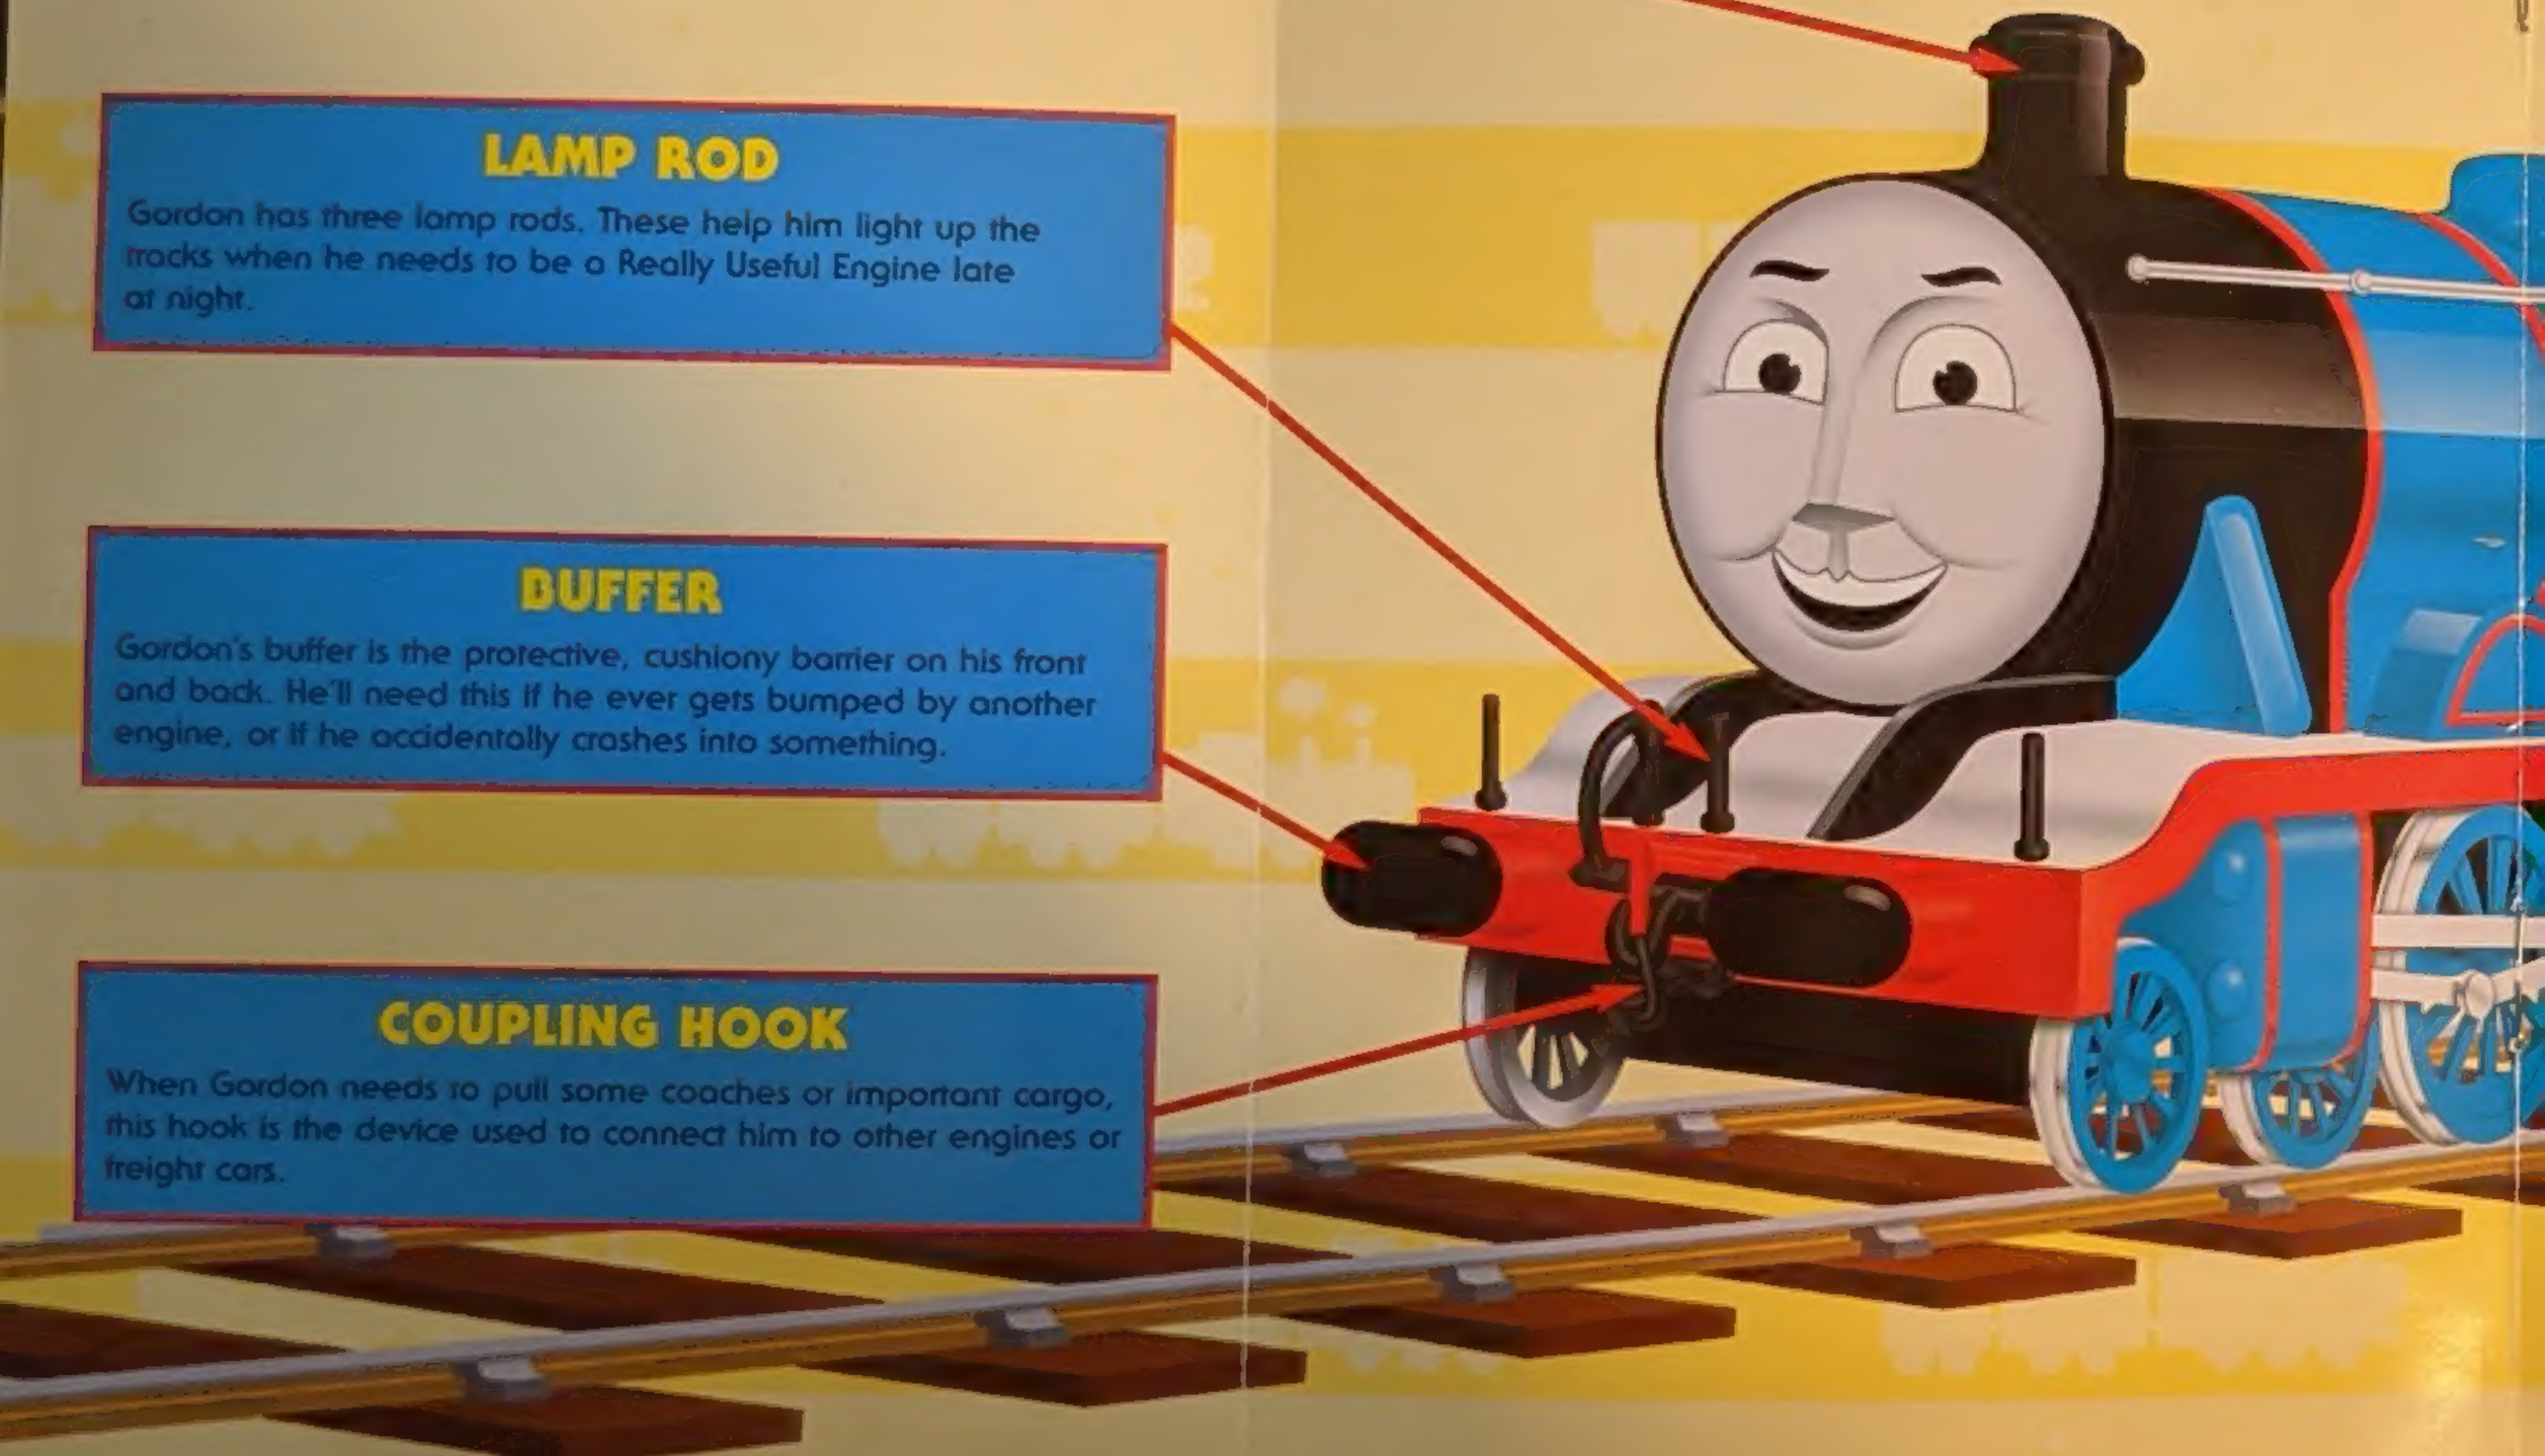
Gordon has three lamp rods. These help him light up the tracks when he needs to be a Really Useful Engine late at night.

BUFFER

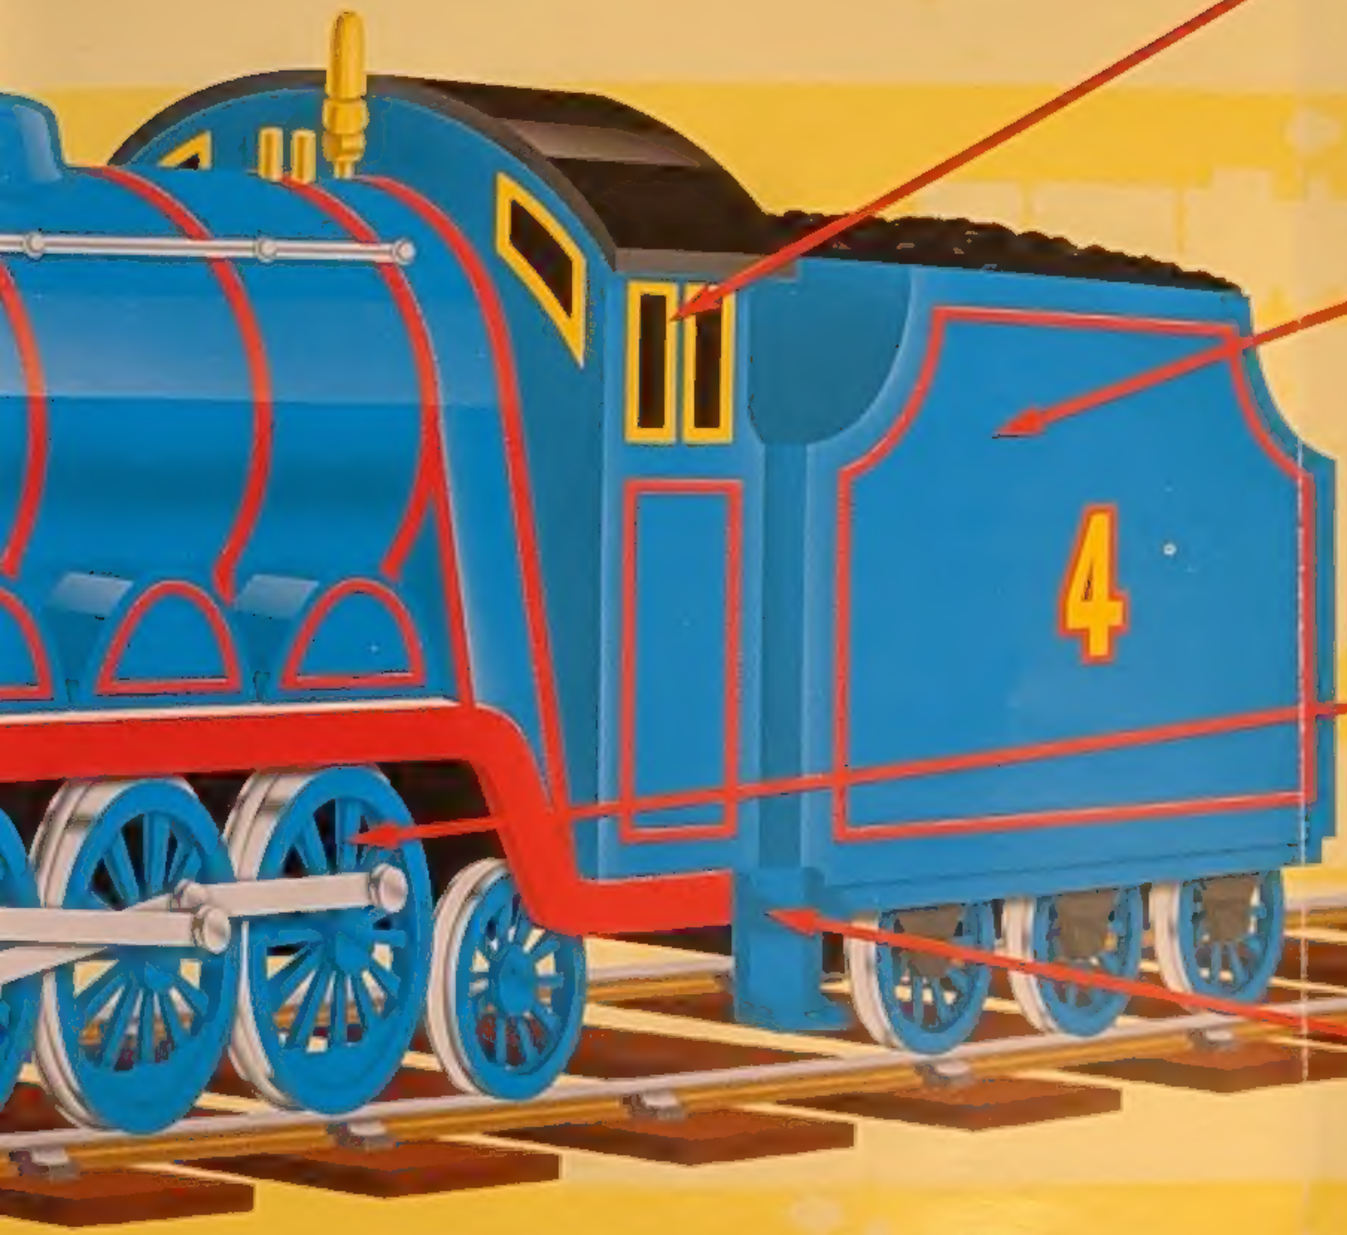
Gordon's buffer is the protective, cushiony barrier on his front and back. He'll need this if he ever gets bumped by another engine, or if he accidentally crashes into something.

COUPLING HOOK

When Gordon needs to pull some coaches or important cargo, this hook is the device used to connect him to other engines or freight cars.



ON WORKS!



WINDOW

You will find these on the side of Gordon's cab. Gordon's driver uses these windows to look out and survey what is ahead of them on the tracks.

TENDER

This is the vehicle or freight car that Gordon pulls behind him. It is used to store Gordon's water and his coal.

WHEEL

Like all engines, Gordon needs his wheels to propel him forward on the tracks. Because of his great length, Gordon has nine wheels on each side.

STEPS

Gordon is both very long and very tall. These steps help his driver climb aboard this sizeable express engine.
